

Getac Veritone INTEGRATION

Veritone brings AI-powered redaction to Getac's Rugged Solutions, making it faster and easier to remove sensitive information from video and audio files.

SMARTER, FASTER REDACTION FOR LAW ENFORCEMENT

As video becomes a core part of modern policing, transparency and privacy are more important than ever. That's why Getac Video Solutions now integrates seamlessly with Veritone Redact—a powerful AI-driven platform that automates the redaction of sensitive content across your video and audio evidence.

BUILT FOR THE REALITIES OF LAW ENFORCEMENT

Manual redaction is time-consuming and resource-intensive. It requires significant staff hours, drives up costs, and increases the potential for human errors. The Getac + Veritone integration changes that. Whether it's faces, license plates, driver's licenses, MDT screens, documents or handwritten notes, Veritone Redact automatically detects and blurs sensitive information—directly from video captured on Getac's industry-leading BC-04 4K AI body worn camera and reliable in-car systems. That means less time scrubbing footage, reduced infrastructure demands, fewer errors, lower costs, and more time focusing on cases.

BENEFITS OF THE GETAC VERITONE INTEGRATION

- ✓ **Automated redaction** of faces, license plates, MDTs, notepads, and other sensitive visuals—directly from your Getac body-worn camera and in-car systems.
- ✓ **Intelligent detection & tracking** of people and objects across both video and audio evidence.
- ✓ **Streamlined workflow integration** - Access Veritone Redact directly through the Getac Video Platform.
- ✓ **Save hours of manual work** - No more scrubbing footage frame by frame.
- ✓ **Built for compliance** - Make public records requests and court submissions faster and easier.
- ✓ **Secure and scalable** - Designed to support agencies of any size or caseload

GETAC VERITONE INTEGRATION

Getac and Veritone deliver fast, AI-powered redaction. No scrubbing, no guesswork. Integrated into the Getac Video Platform, it streamlines compliance, protects privacy, and saves your agency valuable time.

AI DRIVEN REDACTION

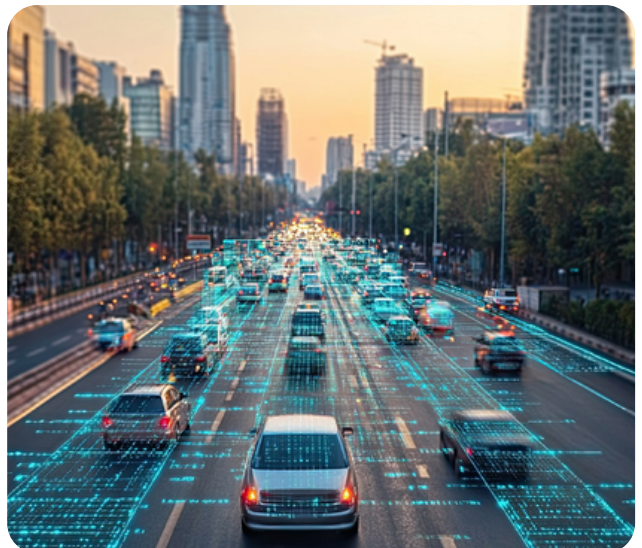

Our AI-powered system automatically detects faces, license plates, notepads, laptops, and MDTs in video and image evidence, presenting results chronologically in a preview pane and directly within the video player for seamless review and redaction.

Selecting user-defined objects such as ID cards, officer notebooks or any other PII within your video evidence, then optionally track the item forward in the video.

Redacting detected heads, user-defined objects and even spoken words and phrases within video evidence automatically with one-click.

WORK SMARTER WITH GETAC REDACT FASTER WITH VERITONE

With Veritone Redact seamlessly integrated into the Getac Video Platform, your agency can handle large volumes of digital evidence—quickly, accurately, and securely. Whether you're fulfilling public records requests or preparing courtroom-ready files, redaction is now faster, more consistent, and fully auditable.
