Stay Connected Through Every Second of Care.

Reliable, prioritized connectivity built for EMS, from dispatch to transport to arrival.

Every second matters when a patient is in your care. EMS teams depend on connectivity for critical communications, patient information, medical applications and coordination with receiving facilities.
EverLink + T-Priority™ help keep ambulances, care teams and critical applications connected when networks are congested, coverage is limited or conditions change.

Connectivity Built for Patient Care

Keep Critical Data Moving

Emergencies and major incidents can overwhelm public networks. T-Priority™ provides eligible first responder traffic with priority and preemption, helping EMS teams maintain access to critical applications and information during network congestion.

Maintain Connectivity During Transport

An ambulance is constantly moving between coverage areas. EverLink can switch to another available connection, including satellite when equipped and activated, providing an alternate path when the primary connection is unavailable.

Share Patient Information En Route

Support compatible medical devices and patient-care applications used to transmit critical information to receiving facilities, helping hospital teams prepare before the patient arrives.

Support Telehealth From the Field

Reliable broadband connectivity can support compatible video consultation and telehealth tools, giving EMS teams another way to connect with clinical resources when needed.

Keep the Ambulance Connected

Provide connectivity for authorized laptops, tablets, medical devices and other connected technology used throughout the response and transport.

5959 Corporate Drive, Suite 1225, Houston, TX 77036

From the Ambulance to the Care Team

T-Priority

Priority when every second matters.

Priority and preemption for eligible first responder traffic on T-Mobile's network helps keep critical communications and data moving during periods of heavy network congestion.

T-Satellite with STARLINK

Extend connectivity beyond traditional coverage.

Compatible devices can access satellite connectivity in areas where terrestrial cellular coverage may be unavailable, helping EMS teams stay connected beyond the ambulance.*

Connect the Response.
Support the Care.
