Stay Connected When the Call Takes You Anywhere.

Reliable, prioritized connectivity built for fire response, from the apparatus to the incident scene.

Structure fires. Wildland incidents. Major emergencies. Mutual aid responses. Fire crews need access to critical information wherever the call takes them. EverLink + T-Priority™ help keep apparatus, crews and command connected when networks are congested, coverage is limited or conditions change.

Connectivity Built for the Response

Keep Critical Data Moving

Large incidents can overwhelm public networks. T-Priority™ provides eligible first responder traffic with priority and preemption, helping crews maintain access to critical applications and information during network congestion.

Stay Connected in Remote Response Areas

Wildland fires and rural calls can take crews beyond reliable cellular coverage. EverLink can switch to another available connection, including satellite when equipped and activated, providing an alternate path when the primary connection is unavailable.

Give Incident Command Greater Visibility

Support compatible cameras, drones and video systems with the broadband connectivity needed to share live information from the field, helping command monitor conditions, hazards and response operations.

Keep Mapping & Incident Information Accessible

Support connected laptops, tablets and applications used for mapping, assignments, weather information, incident documentation and other response-critical data.

Create a Connected Command Point

An appropriately equipped apparatus or command vehicle can provide a shared connection for authorized devices, helping teams establish connectivity at staging areas, command posts and large-scale incidents.

5959 Corporate Drive, Suite 1225, Houston, TX 77036

From the Apparatus to the Firefighter

T-Priority

Priority when networks are under pressure.

Priority and preemption for eligible first responder traffic on T-Mobile's network helps keep critical communications and data moving during periods of heavy network congestion.

T-Satellite with STARLINK

Extend connectivity beyond traditional coverage.

Compatible devices can access satellite connectivity in areas where terrestrial cellular coverage may be unavailable — extending the connection beyond the apparatus.*

When Conditions Change, Your Connection Shouldn't Be the Weak Link.
